

FEMA Authorizes Funds to Fight Wyoming's Mullen Fire

Release Date: septiembre 26, 2020

DENVER – This morning, FEMA authorized the use of federal funds to help with firefighting costs for the Mullen Fire burning in Albany and Carbon Counties, Wyoming.

FEMA Regional Administrator Lee dePalo approved the state's request for a federal Fire Management Assistance Grant (FMAG) after receiving the request and determining that the fire threatened such destruction as would constitute a major disaster.

At the time of the request, the Mullen Fire was threatening approximately 300 homes in and around the subdivisions of Albany, Jelm, Keystone, Rambler, Woods landing, and Double Creek. Mandatory evacuations were taking place for approximately 180+ people. The fire was also threatening infrastructure, utilities, and a watershed in the area that provides water to Cheyenne, Wyoming.

Approximately 40 miles of Highway 230 is closed until further notice. The fire started September 17, 2020 and has burned in excess of 36,000 acres of federal, state, and private land.

The authorization makes FEMA funding available to pay 75 percent of the state's eligible firefighting costs under an approved grant for managing, mitigating and controlling designated fires. These grants do not provide assistance to individual home or business owners and do not cover other infrastructure damage caused by the fire.

Fire Management Assistance Grants are provided through the President's Disaster Relief Fund and are made available by FEMA to assist in fighting fires that threaten to cause a major disaster. Eligible items can include expenses for field camps; equipment use, repair and replacement; mobilization and demobilization activities; and tools, materials and supplies.

With the FMAG authorization, additional funding is made available through the Hazard Mitigation Grant Program (HMGP) Post Fire for the mitigation of wildfire and related hazards, such as flood after fire or erosion. Some eligible wildfire project types include defensible space measures, ignition-resistant construction, and hazardous fuels reduction.
