FEMA, State approve \$6.6 million for Orange Beach debris removal after Hurricane Sally

MONTGOMERY, Ala -- FEMA and the State of Alabama have approved \$6,681,233 to reimburse the City of Orange Beach for debris removal after Hurricane Sally.

The funds reimburse the city for expenses removing 199,698 Cubic Yards of Vegetative Debris and 144,996 CY of construction and demolition debris, 1406 tons of white goods, 227 tons of e-waste, and 35.57 tons of hazardous household waste from City roads, right-of-ways and public property throughout the applicant's jurisdiction.

FEMA's share of the grant is 75 percent, or \$5,010,925, with the remainder funded by state and local and county governments.

FEMA's Public Assistance program provides grants to state, tribal and local governments, and certain private nonprofit organizations, including houses of worship, so communities can quickly recover from major disasters or emergencies.

The Alabama Emergency Management Agency works with FEMA during all phases of the PA program and conducts final reviews of FEMA-approved projects. Applicants work directly with FEMA to identify damages, develop project worksheets, develop scopes of work, and provide required documentation to validate eligible damages and costs. Once the applicant provides the required documentation and it is validated FEMA can begin dispersing funds. Following approvals by FEMA and AEMA, FEMA obligates funding for the project.
