

# Do you live in a floodplain? Get required permits before rebuilding

Repair projects must meet community building codes and floodplain ordinances.

For your safety, Hurricane Helene survivors are urged to consult local building officials **before** beginning construction and repairs. Homes and businesses located in high-risk flood zones are required to comply with locally adopted floodplain regulations, Virginia Building Codes and other standards. These regulations protect people, property, and communities from future events and cannot be waived.

## Permits are required for repairs involving items such as:

- roof
- walls
- siding
- wallboard
- plaster
- insulation
- paneling
- cabinets
- flooring
- electrical system
- plumbing
- heating or air conditioning
