

FEMA Awards Santa Rosa County \$2.83 Million to Improve Stormwater Drainage System

Release Date: Tháng 7 14, 2021

ORLANDO, Fla. – FEMA has approved a grant of \$2,830,737 to help Santa Rosa County improve the drainage basin of the Metron Estates Subdivision in Pace, Florida during a storm.

Funding from FEMA's Hazard Mitigation Grant Program (HMGP) was approved in response to a proposal by the county after Hurricane Irma in 2017. The grant covers improvements to the local stormwater conveyance system including expansion of two existing stormwater ponds, construction of a new stormwater pond and the installation of a stormwater pump station and pipeline to recover rainfall that flows over paved surfaces.

The HMGP is an important source of federal disaster assistance. Program funding may become available after the president declares a major disaster, with a goal of strengthening communities by improving buildings and critical infrastructure. A 2018 report by the National Institute of Building Sciences found that one dollar spent on hazard mitigation saves more than six dollars of recovery and rebuilding costs.

Generally, the HMGP may provide a state, tribe or territory with additional grants up to 15 percent of the total disaster grants awarded by FEMA for a federally declared disaster. States such as Florida that meet advanced mitigation planning criteria may qualify for a higher percentage.

Florida has a FEMA-approved Enhanced Mitigation Plan, making the state eligible for HMGP funding not to exceed 20 percent of the estimated total amount of grant money spent by FEMA in the Hurricane Irma disaster. From this amount, the HMGP reimburses the state up to 75 percent of eligible costs for hazard mitigation projects. The remaining amount comes from other sources such as state and local assets and a combination of cash and in-kind sources.
