Release Number: 015

Ensure You Get the Required Permits You Need to Rebuild in a Flood Zone

People who live in flood-hazard areas and had damage to their homes during the Feb. 15 – 18, 2025, winter flooding in Logan, Mercer, McDowell, Mingo, Raleigh, Wayne, and Wyoming counties are urged to consult local building officials to obtain floodplain development permits before considering repairs or new construction.

Obtaining building permits is especially important for those with homes or businesses located within the 1% annual chance / 100-year floodplain. Floodplain development permits cannot be waived, and local governments cannot reduce or ignore the floodplain requirement. Permits are required for work on removing or replacing the roof, walls, siding, wallboard, plaster, insulation, paneling, cabinets, flooring, electrical system, plumbing, heating or air conditioning. Repair projects must meet community building codes and flood-damage prevention ordinances.

- Permits protect the residents, their families, communities, and buildings by ensuring all proposed work complies with current codes, standards, flood ordinances and construction techniques.
- Permits can provide a permanent record of compliance with elevation, and/or retrofitting requirements, which is useful information when selling your home and necessary for the flood insurance rating.
- Local permit offices can provide suggestions or literature on how to better protect your home or business from future disaster-related damages.
- Local permit offices can provide consumers with information on selecting licensed contractors and advice on protecting themselves from unscrupulous contractors.
- Residents are asked to start construction and repair only after they have received permits from their local building department.
